

HASAN HELALI

Senior Unity Game Developer

(+90)553 658 8043 • hasan.helali14@gmail.com • [linkedin.com](#) • [portfolio](#)

Summary

Results-driven Senior Unity Game Developer with **7+ years** of experience engineering and scaling high-performance 2D, 3D, and real-time **multiplayer** titles with 10M+ total players. Deep expertise in **client-server architecture** (SmartFoxServer, Mirror, Photon), reusable and **clean architecture** (Zenject, SOLID, Signal Bus), and mobile **performance profiling** (Draw Calls, Memory Footprint, GC spikes). Proven track record leading end-to-end game production, building **Live-Ops** pipelines via Addressables, and integrating cutting-edge AR technologies.

Skills

Core: Unity, C#, Java, SQL, Gameplay Systems, Physics, Animator, Scalable UI/UX, Pipeline Setup, Optimization & Performance, Problem Solving, Multitasking, Team Collaboration

Architecture & Patterns: Object-Oriented Programming (OOP), SOLID Principles, Dependency Injection, Event Driven Architecture, Clean & Maintainable Code, Design Patterns (MVC, MVP, Singleton, Observer, State, Command, Factory, Object Pooling, etc.)

Multiplayer & Networking: Client-Server Authoritative Architecture, SmartFoxServer 2X, Mirror Networking, Photon (PUN/Fusion), WebSockets, State Synchronization, Latency Compensation

Augmented Reality (AR): Google ARCore Geospatial API, VPS/GPS Real-World Anchoring, AR Foundation, Mapbox, Spatial Meshing, Plane Detection

Optimization & Profiling: Unity Profiler, Memory Profiler, Frame Debugger, Draw Call Batching (SRP Batcher, GPU Instancing), Occlusion Culling, GC Allocation Reduction, AssetBundle Optimization

Live-Ops, Assets & Tools: Addressable Asset System, Asset Bundles, Remote Config, Firebase SDK, GameAnalytics, In-App Purchasing (IAP), AdMob SDKs, DOTween Pro, Cinemachine, Shader Graph

Tooling & Methodologies: Git, Jira, Trello, Agile/Scrum

Experience

Lead Full-Stack Unity Developer

Istanbul, Turkey - Remote

MH2B Games

01/2025 - currently

- Architected from scratch an online multiplayer **card & board game hub** (Pasoorbaz) supporting 5+ real-time titles with unified matchmaking and seamless room management.
- Structured the codebase using **Zenject** (IoC/DI) and Signal Bus for **event-driven** architecture, establishing a loosely coupled, **modular** foundation adopted across multiple studio projects.
- Programmed **server-side** game logic and state **synchronization** on SmartFoxServer 2X (Java), implementing client reconnection to ongoing match recovery and server-authoritative turn evaluation.
- Engineered a custom event-driven caching system for chat and leaderboards, slashing **high-frequency** server/database load by **30%**.
- Built dynamic **Live-Ops** pipelines utilizing **Addressables** for on-demand asset delivery, reducing initial download size while facilitating hot updates without app-store redeployment.
- Developed competitive **AI bot** algorithms using predictive heuristics to maintain seamless matchmaking liquidity during low-concurrency windows and programmed matchmaking, chat (voice and text), leaderboard, clan and friend systems.
- Mentored** developers through systematic code reviews, enforcing coding standards and DRY/SOLID principles.
- Executed adaptive, **scalable UI** with **localization** and multilingual support.

AR Unity Developer

Los Angeles, USA - Remote

XYZ Studios

06/2024 – 11/2024

- Engineered an interactive location-based AR advergame prototype utilizing **AR Foundation**, Google ARCore Geospatial API, and Mapbox SDK to gamify real-world retail foot traffic.
- Implemented **high-precision** Visual Positioning System (VPS) and GPS coordinate anchoring, enabling stable placement of persistent 3D interactive brand assets across complex mall layouts.
- Developed real-time turn-by-turn AR **pathfinding** and directional compass systems, guiding users between physical points of interest (POIs).
- Programmed **physics-driven** spatial mini-games utilizing real-time plane detection, depth raycasting, and custom gesture recognition for immersive brand interactions.
- Optimized** mobile camera rendering loops, thermal throttle impact, and memory allocations, securing a sustained 60 FPS on mobile devices.

Full-Stack Unity Developer

Isfahan, Iran - Remote

Papata Game Studio

05/2023 - 04/2024

- Led** client-side maintenance and feature engineering for Soltan Hokm, a flagship online multiplayer card game with over 10M+ installs and high daily active users (DAU).
- Spearheaded comprehensive code refactoring and asset **optimization**, cutting total APK/IPA build size by 35% and accelerating scene load times by 25% and enforced extensive **bug fixes** to enhance overall stability.
- Stabilized core multiplayer gameplay loops by debugging and **refactoring** SmartFoxServer 2X extensions, resolving legacy synchronization edge cases and packet drops.
- Implemented **data-driven** Live-Ops features including Hall of Fame, Clan systems, seasonal tournaments, and dynamic remote-configured reward events.

- Collaborated closely with **QA** engineers to establish structured profiling workflows, drastically reducing critical crash rates on lower-tier Android hardware.
- **Streamlined** development processes for increased efficiency and reduced project timelines.

Unity Developer

Tehran, Iran - Remote

Sargarmidan Game Studio

09/2021 - 04/2023

- Collaborated simultaneously with **multiple team members** across 4 commercial mobile titles spanning stealth-action, auto-battler, casual idle tycoon, and combat runner genres with clean and **modular** code following **SOLID** design principles and design patterns.
- Programmed sensory AI systems and multi-phase boss behaviors using **Finite State Machines** (FSM) and dynamic **NavMesh** pathfinding for the 100-level title "Russian Spy".
- Built an extensible **grid-based tactical combat** and faction-synergy engine for an auto-battler, implementing automated unit behavior evaluation, star-tier merging, and mana-driven skill loops.
- Engineered dynamic resource pipelines, **NPC** dispatch loops, and store-expansion mechanics for a high-density idle tycoon game ("Haji Almas"), leveraging **ScriptableObjects** for balancing.
- Designed custom **character controllers** combining root motion, kinematic physics, and procedural camera sequences using **Cinemachine** and Timeline.
- Integrated the studio's proprietary Backman **cloud backend** for remote save-state validation, inventory reconciliation, and dynamic live configuration like **achievements** and missions systems.
- Created **shaders and visual effects** and various of animations.

Unity Developer

Tabriz, Iran

Unity Developer North Wind Studio

02/2020 - 06/2021

- Built an authoritative multiplayer action-brawler on **Mirror** Networking, engineering client-side prediction, weapon hit registration, and server-authoritative elimination checks.
- Developed a real-time 2D dynamic **Field of View** (FOV) shadow-casting system with stealth occlusion zones and synchronized interactive terminal tasks.
- Programmed a dynamic **line-drawing** physics puzzle game, generating real-time procedural spline meshes and 2D edge colliders with custom momentum-preserving skate kinematics.
- Formulated modular input abstractions utilizing Unity's **New Input System** for responsive touch controls.
- **Communicated** with art, production and programming teams to design innovative game elements and optimize quality.

Designer & Unity Developer

Tabriz, Iran

BoneFire Games

10/2018 - 01/2020

- **Co-developed** a turn-based multiplayer tower defense game on **Photon**, programming tower placement grids, creep pathfinding, and synchronized round-resolution mechanics.
- Authored comprehensive **Game Design Documents** (GDD), technical flowcharts, and architecture diagrams to streamline cross-discipline collaboration between art and programming teams.
- Implemented **third-party** monetization and tracking SDKs, ensuring compliant ad mediation and IAP delivery.

Education

University of Azerbaijan Shahid Madani

Tabriz, Iran

Bachelor's Degree in Computer Engineering - Software

01/2018 - 01/2022

Projects

PasourBaz:

MH2B

Delivered Online multiplayer hub (5+ card/board games) featuring real-time matchmaking, SFS2X Java backend, Opus voice integration, and Zenject-driven modular architecture. See more: [Myket.ir](https://myket.ir)

Sultan Hokm:

Papata

Scaled and optimized a live production multiplayer card game with 2M+ installs, slashed build footprint by 35% and stabilized server-client sync. See more: GooglePlay.com - CafeBazaar.ir

Hajji Almas's Daughter:

Sargarmidan

Delivered a culturally inspired casual management game with strategic upgrades, resource management, and dynamic, scalable systems for engaging gameplay. See more: CafeBazaar.ir - GoogleDrive.com

Russian Spy:

Sargarmidan

Stealth-action mobile title with 100 levels, intelligent vision-cone AI, multi-stage boss mechanics, and tactical gear systems. See more: CafeBazaar.ir - GoogleDrive.com

Western Run:

Sargarmidan

Delivered a fast-paced Wild West endless runner with procedural terrain, agile movement, upgradeable characters and weapons, and optimized performance for a polished mobile experience. See more: CafeBazaar.ir - GoogleDrive.com

Beginner Unity Development Course

Daneshjooyar

Designed and delivered a 17-hour Unity game development course for over 500 students, featuring hands-on projects and structured learning materials.
